

## Installing your projector drop mount

### 1. Attach ceiling plate to ceiling

Drill into a stud, securing the ceiling plate with screws through the small outer holes. The other offset hole is to run cables through if necessary.

### 2. Attach the drop-mount extender to the ceiling plate

Screw the shorter end (closer to the length adjustments) into the threaded central hole of the ceiling plate.

### 3. Attach your projector and projector mount

First attach your projector to the projector mount using the provided instructions. Then screw that combination onto the bottom of the drop-mount extender.
