

## Floor Mounted Projector Enclosure Instructions

Follow these steps to complete the assembly of your Floor Mounted Projector Enclosure.

- 1) Remove the front window by unscrewing the four corner screws. Note its orientation for reinstallation.
- 2) Peel the protective film off both window sides.
- 3) Position the enclosure in the desired spot for your golf simulator setup.
- 4) Set your projector inside the enclosure, with the provided wedges angling the rear of the projector up (this helps bring the image down onto the screen).
- 5) Run cables through the side slots.
- 6) Turn the projector on and fine tune the position of the enclosure and wedges, as needed for optimal image alignment.
- 7) Reattach window, maintaining original orientation. Avoid over-tightening screws.
- 8) Attach turf to the curved top of the enclosure.
  - A. Peel the film off the back side of the turf and stick turf onto the curved top of the enclosure.
  - B. Or, for a temporary turf option, set the turf on the enclosure without uncovering the tape.
  - C. Or, to match any existing turf in your golf simulator, use the provided turf as a template. Cut your own turf and attach it.
